SOPHISTICATION VALUE THE PROJECT

This website will give editor a scope to edit or add content on website themselves. Earlier all this job involved a coder who used to take content from editor and used to add to website. But now with help of this new website editor, designer will be helped a lot as they will be having ability to accomplish their task up to their full satisfaction without coding.

This website has following features:

1. Admin can authorize / deauthorize editor, he can approve the comments made by registered users along with all other basic stuff.
2. An authorized editor can add/edit content on website and also can format it.
3. Registered reader can comment on the article and submit it for approval from admin.
4. Guest users have ability to read the articles and if they want to comment they can register to do the same.

These things made it possible to overcome previous limitations of the website.

COMPABILITY ISSUES

Some points to be kept in mind for a successful run of this web application:
  o An updated web browser that supports various web technologies.
  o A working internet connection.

While working on this project, the compatibility issues that we faced were to while migration of work from localhost to main server at TCO.
